

David Papp

AI Engineering Student | Junior AI / Automation Engineer | Rotterdam, Netherlands

contact@davidpapp.dev	davidpapp.dev	github.com/pappdavid	linkedin.com/in/david-papp
-----------------------	---------------	----------------------	----------------------------

Summary

AI engineering student at Vrije Universiteit Amsterdam building production-focused LLM systems: agent observability, guardrails, fine-tuning pipelines, and retrieval interfaces. Recently cut LLM API usage by approximately 40% in a consulting engagement and hardened prompt-injection controls around tool and moderation boundaries.

Selected Systems

MCP Sentinel

Drop-in observability and guardrails for MCP tool calls. Logs every event, applies injection, PII, cost, and rate-limit checks, and keeps p99 overhead below 12ms in the portfolio case study.

Custom Training Pipeline

Repo/documentation ingestion pipeline that chunks source material, generates instruction-response pairs, validates JSONL, and prepares data for LoRA-style fine-tuning handoff.

RAG + 3D Chat

Retrieval-augmented chat interface with document/repo inputs, source-grounded answers, and deterministic Three.js scene rendering for spatial outputs.

Experience

AI Startup Consulting - LLM Backend and Safety

Restructured LLM backend call paths to reduce unnecessary API usage by approximately 40%. Closed a prompt-injection vulnerability in a moderation layer and documented operational guardrails.

Project Assistant - 4iG, Budapest

Supported two large public-sector IT projects before university, working across coordination, documentation, and delivery support.

Programming Instructor - Logiscool

Taught programming fundamentals and supported student learning through practical coding exercises.

Education

BSc Artificial Intelligence - Vrije Universiteit Amsterdam | Sep 2023 - expected 2026

Coursework includes machine learning, deep learning, NLP, computer vision, data mining, algorithms, complexity, and statistics.

Advanced Studies in Computer Science - Milestone Institute, Budapest | 2019 - 2023

Led the Computer Sciences Society.

Technical Skills

AI / LLM	OpenAI API, tool calling, structured outputs, guardrails, prompt-injection defense
RAG / Data	Supabase/Postgres, pgvector, embeddings, retrieval, reranking, citation enforcement
Full Stack	TypeScript, Python, Next.js, React, Tailwind CSS, Node.js, Vercel
Infra	Clerk, Upstash Redis, HMAC signing, RLS policies, monitoring, rate limiting

Availability

Open to junior AI / automation engineer, full-stack AI, and data science roles in the Netherlands. Available for part-time roles during studies and full-time from mid-2026.
