PROFESSIONAL SUMMARY

AI Solutions Developer building LLM-enabled tools, APIs, automation, and integrations for web applications and ERP-connected business systems. Combines practical LLM delivery with business-to-technical translation, deterministic validation, and human review. Completing a BSc in Artificial Intelligence at Vrije Universiteit Amsterdam, expected in 2027.

CORE COMPETENCIES

AI Solutions

Python

TypeScript

LLM Integration

Prompt Engineering

Structured Outputs

Human-in-the-Loop

API Integration

ERP Integration

Automation Design

REST APIs

GitHub Actions

Academic ML

Academic NLP

WORK EXPERIENCE

WEBINFORM IT Ltd Oct 2024 - Present

AI Solutions Developer

Remote — Contract / Freelance

- Build internal AI tools and production LLM functionality for web applications and ERP-connected business systems, including APIs, automation, backend logic, integrations, and user-facing AI interfaces.
- Recovered an inherited AI-first service by reverse-engineering undocumented integration behaviour, repairing architecture and security issues, and reducing LLM API costs by approximately 40%.
- Identified and eliminated a major prompt/context-injection vulnerability, combining AI functionality with deterministic validation and human review where reliability required it.
- Contributed to two ERP/AI integration projects and a wider delivery footprint spanning more than 20 websites/webshops, three internal systems, one user-facing platform, and one AI-first service recovery.

4iG Nyrt. Aug 2022 - Aug 2023

Project Assistant

Budapest, HU

- Drafted a first operating procedure for sorting, tracking, and handoff on a warehouse line, from engineer walkthroughs.
- Helped trace process gaps on that line and logged them for the engineers.
- Supported sorting and distribution handoffs on the warehouse line.
- Documented project meetings and circulated action items for the warehouse rollout.
- Supported on-site connectivity checks at remote telecom sites.

PROJECTS

PromptShield

Working public prototype — rule-based prompt-injection scanner and runtime action inspector. Tests cover benign and malicious prompt classification, remediation output, read-only actions, destructive actions, and sensitive actions requiring approval.

EDUCATION

BSc Artificial Intelligence - Vrije Universiteit Amsterdam 2024 - 2027 expected

Amsterdam, NL · Intelligent Systems track. Expected July 2027. Relevant coursework includes machine learning, natural language processing, intelligent systems, and human-computer interaction for AI.

Advanced Studies Computer Science - Milestone Institute 2019 - 2023

Budapest, HU · Coursework in academic writing, network science, statistics, research methodologies, calculus, and matrix algebra, with Computer Science Society involvement.

SKILLS

Professional AI delivery: LLM integration, prompt engineering, structured outputs, validation, human-in-the-loop workflows, APIs, backend logic, automation, ERP/AI integration, client discovery, solution design

Software development: Python, JavaScript, TypeScript, REST APIs, web applications, internal tools, Git, GitHub Actions

Academic AI: PyTorch, Scikit-learn, machine learning, NLP, feature engineering, model evaluation, Pandas, NumPy

Personal project tooling: MCP, PreToolUse hooks, agent risk scoring, approval workflows, React, Next.js, Prisma, generative UI prototyping

Languages: English (full professional), Hungarian (native)
