§ 1.0 PROFILE

AI Solutions Developer at WEBINFORM IT Ltd (contract, since Oct 2024), building internal AI tools and production LLM functionality for web applications and ERP-integrated systems. Studying Econometrics and Data Science at Vrije Universiteit Amsterdam. University studies began in 2024; changed to this programme in September 2026; graduation expected in 2028. Builds local-first context infrastructure, agent orchestration tooling, and the integrated AgentSec security suite on the side. Based in the Rotterdam area, NL.

§ 2.0 CAPABILITIES

LLMs · Agents:	LLM API integration, prompt & context engineering, MCP protocol, agent tool-call policy hooks, RAG prototyping
Languages:	TypeScript, Python, Rust, SQL, Bash
Frontend · UI:	Next.js, React, Tailwind CSS
Backend · Infra:	Postgres, Prisma, Supabase, Clerk, REST APIs, ERP integrations, Vercel, GitHub Actions
AI · ML (academic):	Machine learning foundations, computational linguistics, multi-agent systems (VU Amsterdam coursework)

§ 3.0 EXPERIENCE

AI Solutions Developer (contract) | **WEBINFORM IT Ltd** Oct 2024 – Present

> Build internal AI tools and production LLM functionality for web applications and ERP-integrated systems: APIs, automation, backend logic, and user-facing AI interfaces

> Recovered an inherited AI-first service by reverse-engineering undocumented integrations, repairing architecture and security issues, and reducing LLM API costs; addressed a prompt/context-injection vulnerability using deterministic validation and human review

> Delivered client websites and webshops, internal systems, and user-facing AI functionality

> Two ERP/AI integration projects with direct involvement in discovery, requirements, solution design, client coordination, proposals, and pricing

Programming Instructor | Logiscool — Feb 2023 – Jun 2023

> Taught Python and Unity using pre-made curricula, and taught JavaScript through a visual block-based tool

Project Assistant | 4iG Nyrt. — Aug 2022 – Aug 2023

> Drafted a first operating procedure for sorting, tracking, and handoff on a warehouse line, from engineer walkthroughs
> Helped trace warehouse-line process gaps and logged findings for the engineers; supported sorting and distribution handoffs on the warehouse line

§ 4.0 SELECTED ENGINEERING PROJECTS

> **VoidArch Context** — local-first repository memory and context engine using embedded SurrealDB, BM25 retrieval, a Tree-sitter code graph, durable memories, and optional local embeddings
> **VoidArch Studio** — active-development local orchestration control room with daemon-owned agent sessions, worktrees, runs, safety hooks, observability, and a Tauri shell
> **AgentSec Suite** — integrated prompt scanning, MCP analysis, agent risk mapping, approval workflows, and local tool-call hooks; live demo
> **Client Studio** — source-excerpt demo over fictional intake, reviewed questions, activation, and runtime recovery; no AI calls. public demo (source private)
> **Active Companion** — scripted retrieval replay over bundled fictional conversations; no live microphone or hosted inference. public replay · source
> **saas-core** — private modular Next.js scaffold and product-factory infrastructure with typed presets, validation, rendering, and CI workflows
> **Hosted AI product showcases** — six live sample workflows for stand-up drafting, meeting costs, delivery metrics, cloud-cost review, ticket-vs-diff scope, and code-documentation review. Inputs are synthetic or visitor-supplied; optional inference supports visitor keys or bounded invite access, with no connected-account OAuth. StandupLiar · MeetingReceipt · VelocityTruth · CloudShame · Spec.cop · CruelDocs

§ 5.0 EDUCATION

Econometrics and Data Science | Vrije Universiteit Amsterdam — Sep 2026 – 2028 (expected)

University studies since 2024; previously Artificial Intelligence (2024–2026, no degree awarded). Changed programme to Econometrics and Data Science in September 2026. Coursework across university studies includes machine learning, computational linguistics, multi-agent systems, data structures & algorithms, linear algebra, calculus, and logic
